CODEX VITAE

Frédéric Fichepain (Author)

SUMMARY

HYPOTHESES TO BE VERIFIED:

- **A)** Treatise on Unified Vibratory Physics - Atomic Clock Offset Pages: from A1 to A13
- B) Universal Gravity: From the Fall of Bodies to the Fall of Dogmas P. from B1 to B8
- C) Record of the Largest MAGIC SQUARE of Prime Numbers (50x50 = 2500 numbers) P. from C1 to C15
- D) Architecture and Mathematical Demonstration of the Non-Dissipative Resonance Generator P. from D1 to D4
- E) Fichepain Constant (\digamma = 1.118) and Vortex Genetics P. from E1 to E10
- F) Resonant Atomic Structure of Water (H2O) P. from F11 to F20
- G) Irrefutable Proof of the Existence of the \digamma Constant (Analysis of an Egg) P. from G21 to G30

TREATISE 0:

- The Hidden Order of Prime Numbers: The Vortex P.1
- Universal Manual: The Vortex Sieve P.6
- Fichepain Codex: The Calculation of NP+1 P.10
- INPI Patent Deposit: Free Energy P.18

76 RIDDLE RESOLUTIONS:

- TREATISE 1: P vs NP Equivalence (Information Symmetry) P.24
- TREATISE 2: Navier-Stokes Equations (Confinement of Chaos) P.27
- TREATISE 3: The Riemann Hypothesis (The Equatorial Rail) P.30
- TREATISE 4: Birch and Swinnerton-Dyer Conjecture (BSD) (Rational Points) P.32
- TREATISE 5: Hodge Conjecture (Algebraic Cycles) P.35
- TREATISE 6: Yang-Mills Theory (The Mass Gap) P.37
- TREATISE 7: Fermat's Last Theorem (Vortex Structure) P.39
- TREATISE 8: Poincaré Conjecture (Time Gain Algorithm) P.42
- TREATISE 9: Odd Perfect Numbers (Proof of Inexistence) P.45
- TREATISE 10: Collatz Conjecture (Syracuse) (Electron Domination) P.48
- TREATISE 11: Hilbert's 16th Problem (Quantization of Life Rails) P.58
- TREATISE 12: Goldbach's Conjecture (Harmonic Fusion of Frequencies) P.61
- TREATISE 13: Structure and Properties of DNA (Vortex) P.66
- TREATISE 14: The Next 100 Mersenne Numbers P.71
- TREATISE 15: Brocard's Problem (Brown Numbers: \bm{n! + 1 = m^2}) P.84
- TREATISE 16: Beal's Conjecture (or Bill) P.86

• TREATISE 17: Gilbreath's Conjecture (on Prime Number Differences) P.88
• TREATISE 18: Lonely Runner Conjecture P.90
• TREATISE 19: Kepler Conjecture (Sphere Packing) P.92
• TREATISE 20: Polignac's Conjecture (Gaps \bm{\{k\}} between Primes) P.95
• TREATISE 21: Lychrel Conjecture (Palindromic Numbers) P.97A
• TREATISE 22: Berry-Tabor Conjecture (Quantum Chaos and Energy Levels) P.97B
• TREATISE 23: Landau's Conjecture (Unsolved Problems on Primes) P.97C
• TREATISE 24: Infinity of Twin Primes by Torsion Coupling P.99
• TREATISE 25: Circles of Apollonius P.102
• TREATISE 26: Harmonic Revolution and Gauss Resolution P.106
• TREATISE 27: Giuga's Conjecture (The Yoga of Resonance) P.111
• TREATISE 28: Montgomery's Conjecture (GUE Repulsion and Correlation) P.115
• TREATISE 29: Lindelöf Hypothesis (Amplitude Smoothing and Absorption) P.119
• TREATISE 30: Elliott-Halberstam Conjecture (Capillarity and Distribution) P.122
• TREATISE 31: Hardy-Littlewood Conjecture (Regularity of N-tuples and Flectronic Density) P.126
• TREATISE 32: Dixon's Conjecture (Polynomial Purity and Auto-generation) P.130
• TREATISE 33: Lemoine's Conjecture (Fusion and Reconstitution of Mass) P.134
• TREATISE 34: Beilinson's Conjecture (Flux Locking and Energy Regulation) P.138
• TREATISE 35: Tate Conjecture (Algebraic Symmetry and Perpetuity of the Flux Cycle) P.142
• TREATISE 36: Langlands Conjecture (Wave/Particle Unification and Harmonic Correspondence) P.146
• TREATISE 37: Bloch-Kato Conjecture (Maximum Capacity and Charge Volume) P.150
• TREATISE 38: Deligne Conjecture (Fixing Critical Values and Resonance Points) P.154
• TREATISE 39: Fontaine-Mazur Conjecture (Crystallinity and Geometric Origin of the Particle) P.158
• TREATISE 40: Manin Conjecture (Charge Density and Saturation of Conduction Rails) P.163
• TREATISE 41: Grimm's Conjecture (Collision of Flux Vectors) P.168
• TREATISE 42: Cramér's Conjecture (Compression Limit of the Flux) P.172
• TREATISE 43: Oppermann's Conjecture (Density of Twin Rails in Sectors) P.175
• TREATISE 44: Fortune's Conjecture (Primorial Gaps and Stability) P.179
• TREATISE 45: Bunyakovsky Conjecture (Polynomial Generation and Resonance) P.183
• TREATISE 46: Schinzel's Conjecture (Density of Charge Clusters) P.187
• TREATISE 47: Znám's Conjecture (Saturation of Charge Divisors) P.192
• TREATISE 48: Herzog-Schönheim Conjecture (Partition of Life Rails) P.197
• TREATISE 49: Beilinson Conjecture (Resonance of Charge Values) P.200
• TREATISE 50: Chowla Conjecture (Auto-correlation of Flux Signs) P.203
• TREATISE 51: Waring's Conjecture (Saturation of Energy Reservoirs) P.207
• TREATISE 52: Artin's Conjecture (Density of Flux Generators) P.210
• TREATISE 53: Graham's Conjecture (Maximum of Charge Ratios) P.214
• TREATISE 54: Firoozbakht's Conjecture (Maximum Pressure Gap) P.218
• TREATISE 55: Singmaster's Conjecture (Combinatorial Saturation) P.222

• TREATISE 56: Strassen Conjecture (Optimization of Matrix Product Complexity) P.228
• TREATISE 57: Kaprekar's Routine (6174 = Equilibrium Pivot Number) P.233
• TREATISE 58 . The Euclid numbers (Primality and infinite sequence)
• TREATISE 59 . The ABC Conjecture (Analysis of prime factors)
• TREATISE 60 . The Kelvin Conjecture (Foam structure and partition)
• TREATISE 61 . The Schanuel Conjecture (Transcendence and Vortex)
• TREATISE 62 . Artifox (Flectronic modeling)
• TREATISE 63 . Black Holes (Singularities and flux)
• TREATISE 64 . The Carathéodory Conjecture (Umbilic points and curvature)
• TREATISE 65 . The Chern-Simons Conjecture (Topological invariants)
• TREATISE 66 . The Lehmer Conjecture (Non-vanishing of the Tau function)
• TREATISE 67 . The Tait Conjecture (Locking of alternating knots)
• TREATISE 68 . The Sierpiński Problem (Sierpiński numbers and Vortex)
• TREATISE 69 . The Pillai Conjecture (Differences of perfect powers)
• TREATISE 70 . The Ulam Packing Problem (Maximal compaction)
• TREATISE 71 . The Graham-Sloane Conjecture (Harmonic labeling)
• TREATISE 72 . The Heawood Problem (Coloring of surfaces of genus g)
• TREATISE 73 . The Zimmer Conjecture (Rigidity and dimensionality)
• TREATISE 74 . The Pólya-Vinogradov Inequality (Distribution of characters)
• TREATISE 75 . The Lawson Conjecture (Minimal surfaces in \bm{S^3})
• TREATISE 76 . The Willmore Conjecture (Bending energy)
